

Manual Produk: User Interface Matlab untuk Data Kemiskinan di Indonesia menggunakan Support Vector Regression

Banyak faktor yang mempengaruhi indeks kedalaman kemiskinan, terutama dari indikator kesehatan, SDM maupun ekonomi. Oleh karena itu diperlukan sebuah pemodelan statistika untuk menganalisa faktor-faktor yang mempengaruhi indeks kedalaman kemiskinan di Indonesia. Data kemiskinan yang digunakan pada penelitian ini bersumber dari data SUSENAS 2019 yang berupa data dengan individu pengamatan adalah seluruh propinsi di Indonesia. Beberapa penelitian sebelumnya metode Support Vector Regression (SVR) untuk menaksir Indeks Kedalaman Kemiskinan sebagai variabel respons dengan beberapa variabel dari indikator kesehatan dan ekonomi menunjukkan tingkat akurasi model yang sangat baik. Tetapi SVR terkendala pada pemilihan kernel yang tepat untuk mencari akurasi prediksi optimum. Sehingga perlu dibuatkan sebuah *user interface* yang otomatis memilih jenis kernel terbaik untuk memudahkan proses pemodelan. *User interface* juga akan membantu pengguna menggunakan SVR sekalipun tidak menguasai bahasa pemrograman.

User Interface ini bertujuan menghasilkan sebuah analisis statistika yang memudahkan memetakan pola faktor yang mempengaruhi kemiskinan. Kernel yang digunakan pada GUI Matlab ini menggunakan menggunakan model SVR kernel Gaussian (RBF) dan kernel Polynomial dengan otomatis mencari derajat optimum untuk penaksiran pola yang terbaik berdasarkan tingkat akurasi.

Rancangan GUI

Program pencarian kernel optimum

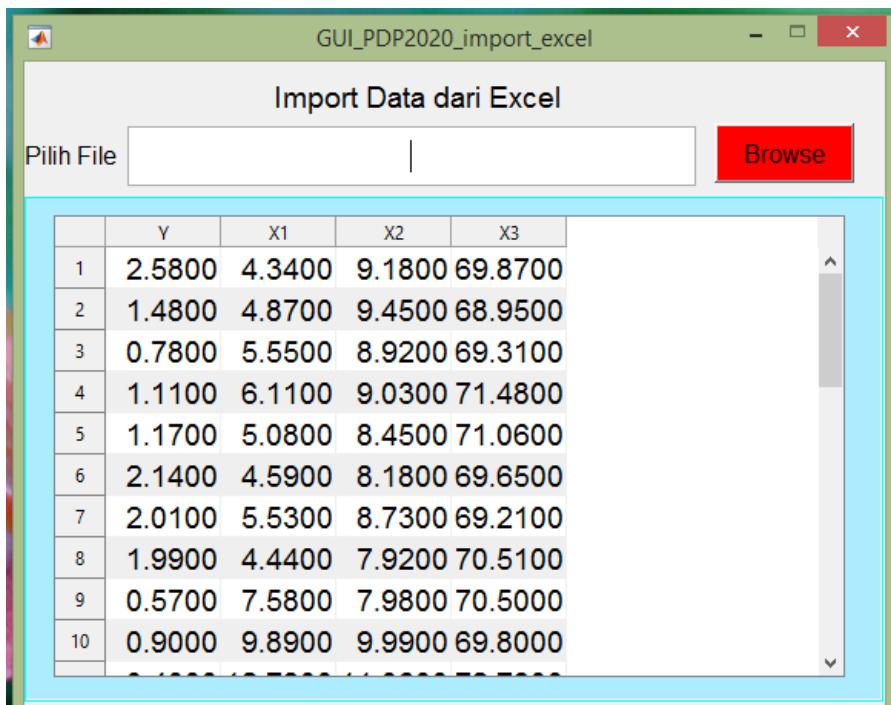

```
function [nsv_best, beta_best, bias_best, p1_best, MSE_best, R2_best]=  
best_svr(X,Y,ker,C,loss,e)  
if (nargin < 3 | nargin > 6) % check correct number of arguments  
    help svr  
else  
    R2_kumpul=zeros(1,3);  
    nsv_kumpul=zeros(1,3);  
    beta_kumpul=zeros(size(Y,1),3);
```

```

bias_kumpul=zeros(1,3);
MSE_kumpul=zeros(1,3);
for i=1:3
    p1=i
    [nsv beta bias]=svr(X,Y,ker);
    Yhat=svroutput(X,X,ker,beta,bias);
    residual=Y-Yhat;
    SSres=sum(residual.^2);
    SStot=sum((Y-mean(Y)).^2);
    MSE=mean(residual.^2);
    R2=1-SSres/SStot;
    R2_kumpul(i)=R2;
    nsv_kumpul(i)=nsv;
    beta_kumpul(:,i)=beta;
    bias_kumpul(i)=bias;
    MSE_kumpul(i)=MSE;
end
derajat=min(find(R2_kumpul==max(R2_kumpul)));
nsv_best=nsv_kumpul(derajat);
beta_best=beta_kumpul(:,derajat);
bias_best=bias_kumpul(derajat);
R2_best=R2_kumpul(derajat);
MSE_best=MSE_kumpul(derajat);
p1_best=derajat;

```

Program GUI memanggil file data (excel)

Syntax program

```

function varargout = GUI_PDP2020_import_excel(varargin)
% GUI_PDP2020_IMPORT_EXCEL MATLAB code for GUI_PDP2020_import_excel.fig

```

```

%      GUI_PDP2020_IMPORT_EXCEL, by itself, creates a new
%      GUI_PDP2020_IMPORT_EXCEL or raises the existing
%      singleton*.
%
%      H = GUI_PDP2020_IMPORT_EXCEL returns the handle to a new
%      GUI_PDP2020_IMPORT_EXCEL or the handle to
%      the existing singleton*.
%
%      GUI_PDP2020_IMPORT_EXCEL('CALLBACK', hObject, eventData, handles,...)
% calls the local
%      function named CALLBACK in GUI_PDP2020_IMPORT_EXCEL.M with the given
% input arguments.
%
%      GUI_PDP2020_IMPORT_EXCEL('Property','Value',...) creates a new
%      GUI_PDP2020_IMPORT_EXCEL or raises the
%      existing singleton*. Starting from the left, property value pairs are
%      applied to the GUI before GUI_PDP2020_import_excel_OpeningFcn gets
% called. An
%      unrecognized property name or invalid value makes property application
%      stop. All inputs are passed to GUI_PDP2020_import_excel_OpeningFcn
% via varargin.
%
% *See GUI Options on GUIDE's Tools menu. Choose "GUI allows only one
% instance to run (singleton)".
