TITLE: Sensorimotor Based Digital Devices: An Alternative Design of Digital Tools in Mathematics Education

AUTHORS: Susilahudin Putrawangsa

----- Overall evaluation -----

SCORE: 1 (weak accept)

----- TEXT:

There is some issues that need to be improved and re write upon article;

1. The write should pay attention to the language especially on how to write in english written language since there is still few grammatical errors on his paper.
2. The article should also followed the conference's guidance, for example, keywords in abstract should not exceeded from 5 keywords.
3. Since this is not a scientific nor empiricism research, researcher should explained more about the methodology that he used in building the theoretical framework of his research.

Overall though the research is quite interesting, yet need more detailed in explaining the methodology.
