

PROSES PERREVIEW ARTIKEL KE IJIM 2021

Email pertama dari editor setelah di submit.

This screenshot shows the first email received from the editor. The subject is "[iJIM] Editor Decision" and it is marked as "External". The sender is Michael E. Auer. The email content is as follows:

Dear author,
Thank you for your submission. The Editor-in-Chief of the journal appointed me as the editor of your paper. In that capacity, I chaired an external review committee ad hoc review. These reviewers were selected from the journal's international review boards specifically to read your submission and offer you, through the development suggestions found below, their thoughts and suggestions. That review process is now complete and so as editor of your post, I share the suggestions below for developing the paper. This mentoring comment describes my and the review committee's thoughts on how to improve your submission.

While we found great value in your paper, we felt it would take a little more time and effort to make it suitable for publication. Rather than withholding to your paper, we hope you'll revise it as you see fit and submit it once more, as you did before. I hope that you continue to revise your paper and find the comments and suggestions helpful that I provide below.

This screenshot shows the continuation of the email content, providing specific feedback and suggestions for revision:

submit it once more, as you did before. I hope that you continue to revise your paper and find the comments and suggestions helpful that I provide below. If you revise your paper based on my suggestions, I hope you will send them the revision of the journal. When you do, the journal's editor-in-chief will review your new version and assign it to the initial review group. On behalf of the whole ummah of scholars who consist of this high reputation journal, thank you for the opportunity to review your submission. My personal opinion is that after reading the paper, the manuscript is of potential interest to readers of this journal, but there are significant issues that must be addressed before the article can be published:

- Strengths of the paper:
 - Research methodology,
 - Results and method of discussion
 - Literature review

Literature review:

1. Several lines should be stated a little.
2. Overall, the paper will have better readability if shorter sentences are to be used and, bulleted lists are to be used (instead of having a sentence file, you can break it down into lists)
3. Please look again at the syntax of a few sentences

This screenshot shows the continuation of the email content, providing detailed feedback on specific sections of the paper:

of the Research Model:

1. Overall the research model is clear and appropriate.

Findings/results:

1. Overall this section is well written and results are clearly presented

Discussion

1. This section is also good overall, with many correlations with the literature

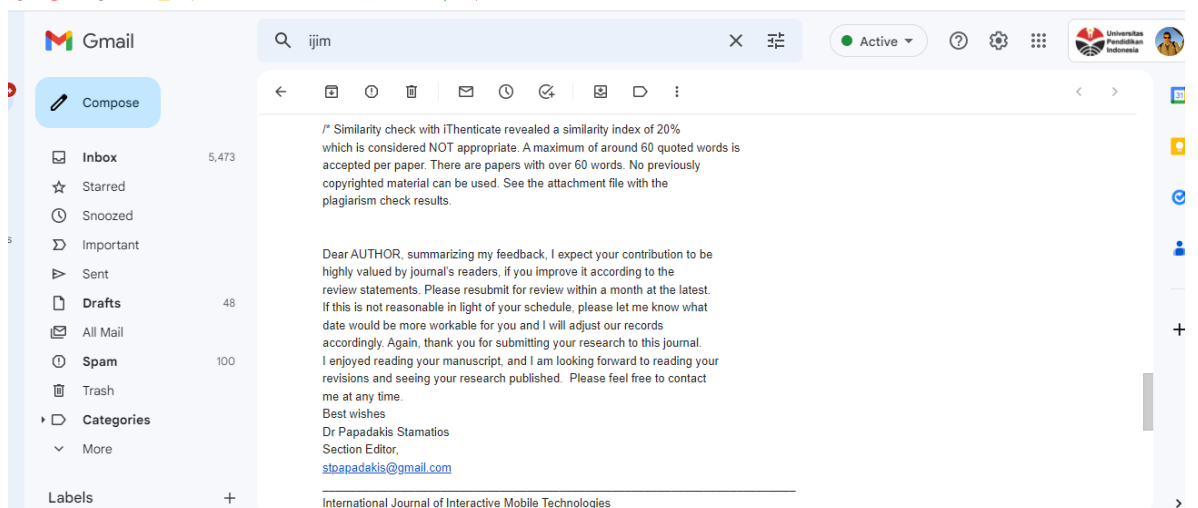

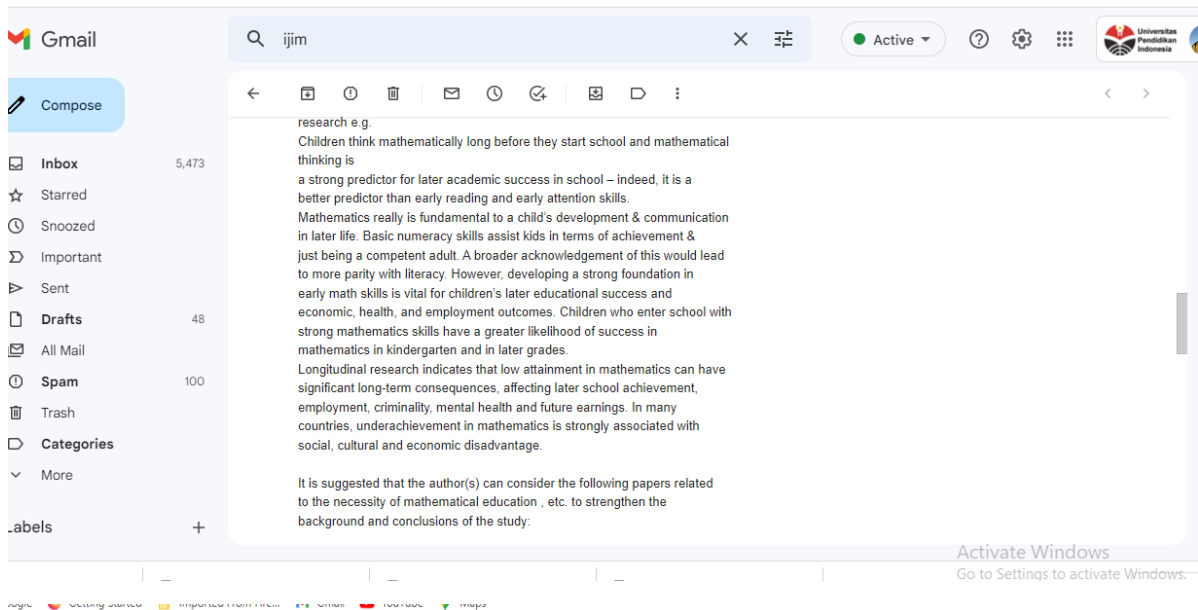

Conclusion

1. The conclusions section is very broad and discusses future research paths and limitations
2. The Implications section is very clear

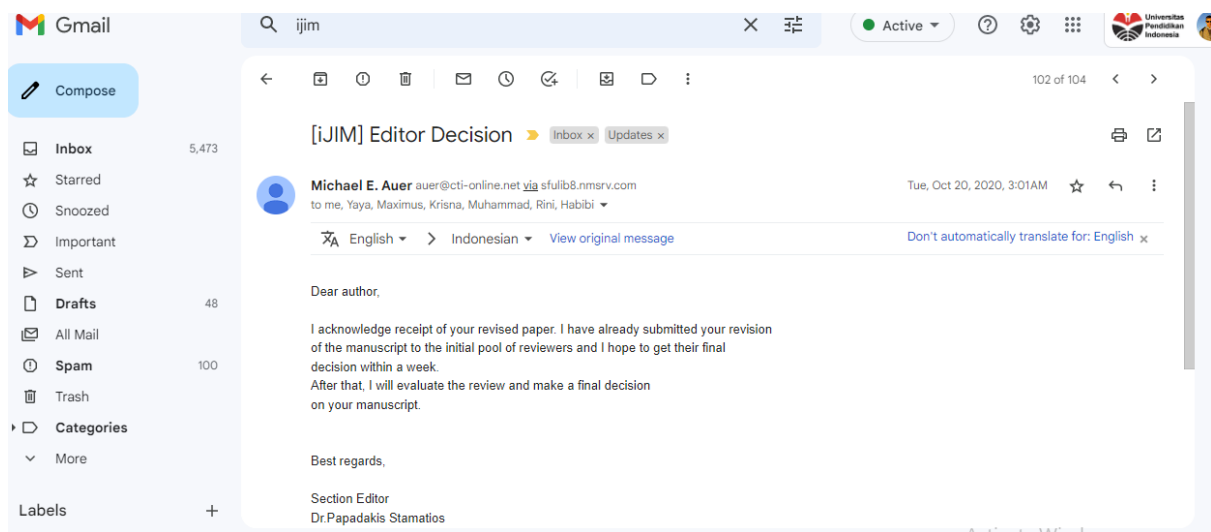

Weaknesses

In the introductory section, I consider it necessary for the author to highlight the need for mathematics education as the basis for current research, for example

Children think mathematically long before they start school and math thinking is a strong predictor of academic success later in school – indeed, it is a

Email kedua,

Email terakhir, pemberitahuan artikel diterima untuk diterbitkan

The screenshot shows a Gmail interface with a search bar containing 'ijim'. The left sidebar lists folders: Compose, Inbox (5,473), Starred, Snoozed, Important, Sent, Drafts (48), All Mail, Spam (100), Trash, Categories, and More. The main content area displays an email from Michael E. Auer (auer@cti-online.net) to the user and others. The subject is '[iJIM] Editor Decision'. The email text reads: 'Mr Dadang Juandi: We have reached a decision regarding your submission to the International Journal of Interactive Mobile Technologies (IJIM), "Effectiveness of Dynamic Geometry Software Applications in Mathematics Learning: A Meta-Analytic Study". We have reached a decision regarding your application. Our decision is to: application accepted. Your final paper is formatted exactly as requested in "Author Guidelines" in "About" of the journal, with author names, institutions, and a short biography in MS Word format (doc, Docx, RTF) so no'. The interface includes a top navigation bar with 'Active' status, a right sidebar with user profile and settings, and an 'Activate Windows' watermark at the bottom right.
